

2020 Floyd E. McDonald Scholarship Winners

Hello! My name is Allison Swigart and I am a forensic chemistry major at Ohio University. In my free time I enjoy reading books, playing with my dogs, and being outdoors. I also have a garden from which I enjoy growing, and cooking my own food. One of my favorite things that I am involved in on campus is Alpha Chi Sigma, which is the professional chemistry fraternity. I am thrilled by the diversity of the career path that I have chosen, and I plan on going to graduate school to better my chemistry degree. I would like to thank you all for the consideration, award, and support of this scholarship. It means a great deal to me to be recognized by an organization of likeminded individuals. Thank you!

My name is Sarah Hegenbart. I am currently a senior at the University of Nevada, Reno, majoring in Biochemistry with a minor in Organic Chemistry. I hope to continue my education at the University of California, Davis by going through the Forensic Science Masters Degree Program. I have been interested in science since middle school. Upon entering college, I began searching careers that would utilize the knowledge and skills gained through my Biochemistry degree. The day I toured the Sacramento Crime lab was the day I realized I wanted to be a Forensic Scientist. From that day forward I wanted to bring peace to families that have been wronged.
